01 What is ElevenLabs?

ENGLISH — ElevenLabs is an AI audio platform offering speech generation, speech recognition, voice tools, dubbing and conversational agents. It is useful for creators, educators, students and developers.

TANGLISH — ElevenLabs na AI audio tools collection da. Text kudutha voice generate pannum; audio kudutha text convert pannum; video-va vera language-ku dub pannum; voice assistant create pannalaam.

Speciality / Tip: One platform for multiple audio tasks; not just a text reader.

02 Text to Speech — complete workflow

ENGLISH — Sign in, open Text to Speech, paste your script, choose a suitable voice and model, adjust available settings, generate, listen, revise and download the audio. Button names may change as the app updates.

TANGLISH — Login panni Text to Speech open pannu. Un script paste pannu. Voice select panni Generate click pannu. Audio ketu correct-ah irundha download pannu. Pronunciation wrong-na script change panni regenerate pannu.

Practical example

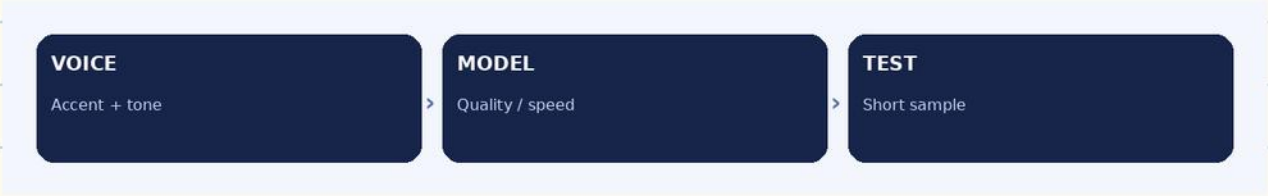

Sample script: "Welcome to AI VERSE. Today we will explore artificial intelligence tools." Use a calm narration voice for an educational intro.

Speciality / Tip: Natural pacing, expressive voices, multilingual models and voice settings. A suitable accent improves pronunciation.

03 Choosing the right voice and model

ENGLISH — Preview several voices. Choose by accent, tone and use case. For a tutorial, favor clear narration; for a character, favor expressive delivery. Model availability and language support vary.

TANGLISH — Tutorial-ku clear voice choose pannu; story-ku expressive voice choose pannu. Tamil/English mixed script-na rendu language support panra model select panni sample generate panni check pannu.

Practical example

Example: English tutorial = calm English narrator; bilingual learning = compatible multilingual voice.

Speciality / Tip: Test 2–3 short lines before spending credits on a long script.

04 Voice cloning — what makes it special?

ENGLISH — Instant Voice Cloning creates a usable voice from short recordings. Professional Voice Cloning uses more training material and is plan-dependent. Only clone your own voice or one you have explicit permission to use.

TANGLISH — Un voice sample record panni AI-la similar voice create pannalaam. Vera yaaroda voice-um permission illaama clone panna koodadhu. Professional cloning-ku eligible paid plan thevai padalaam.

Practical example

Example: Record your own clear voice reading a paragraph, create a permitted clone, then narrate your own study notes.

Speciality / Tip: Voice consistency for repeated narration; never impersonate people deceptively.

05 Voice Changer — speech to speech

ENGLISH — Upload or record speech, select a target voice, generate and compare. It can preserve aspects of the original delivery, rhythm and emotion while changing voice identity.

TANGLISH — Nee pesuna audio upload pannu; target voice select pannu; generate panna voice style maarum, original expression konjam preserve aagum.

Practical example

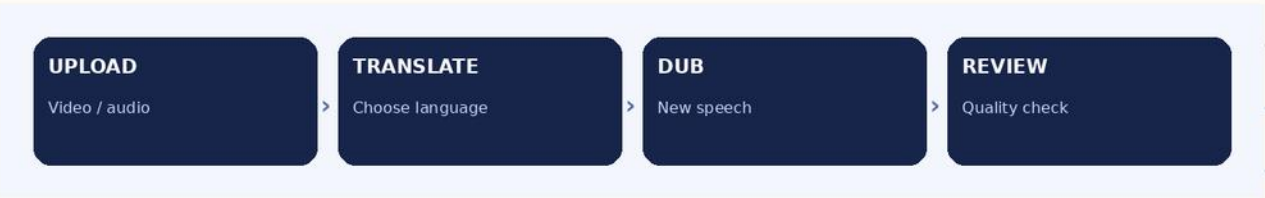

Example: Record an enthusiastic introduction, then transform it into an authorized character voice.

Speciality / Tip: Useful when text-to-speech cannot reproduce a very specific performance.

06 AI Dubbing — translate videos

ENGLISH — Upload a supported audio/video source, select the source and target languages, run dubbing, review translated speech and timing, then export if your plan allows. Review names and technical terms carefully.

TANGLISH — English video-va Tamil-la voice dub pannanumna video upload panni target Tamil select pannu. Output-la pronunciation, timing, translation ellam check pannu.

Practical example

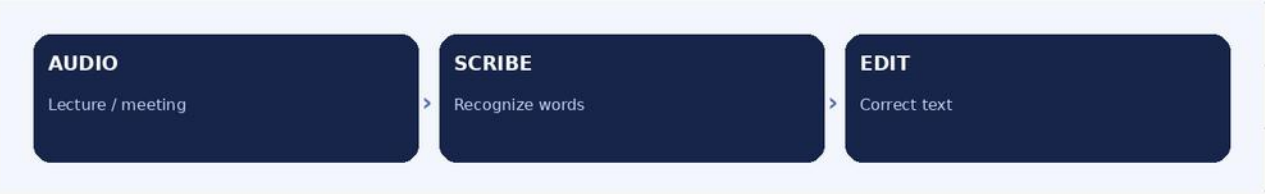

Example: Convert an English lesson narration into a Tamil version for students.

Speciality / Tip: Attempts to retain speaker characteristics and background audio; human review remains important.

07 Speech to Text — transcription

ENGLISH — Upload or record speech, run a supported transcription model, review the transcript, correct names and punctuation, and export text or captions when available.

TANGLISH — Audio file kudutha adhul pesunadha text-ah convert pannum. Class lecture notes, interview, subtitles-ku use pannalaam. Final text proofread pannu.

Practical example

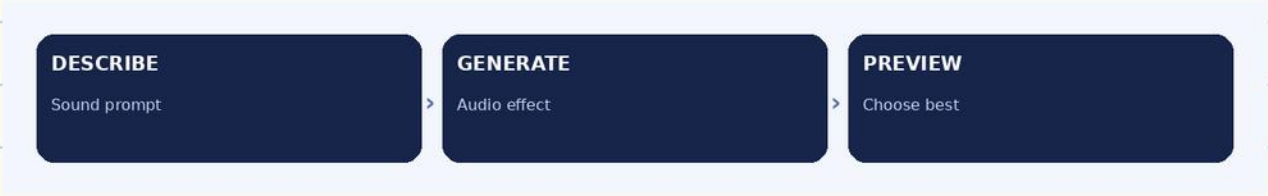

Example: Turn a 3-minute recorded explanation into editable notes.

Speciality / Tip: Word-level timing and speaker identification may be available with compatible models.

08 Sound Effects — text to audio

ENGLISH — Describe the sound you want, generate variations, preview them and download the suitable result. Avoid copying copyrighted signature sounds.

TANGLISH — "Rain falling on a window" nu prompt kudutha rain sound effect generate panna try pannum. Video, game, presentation-ku use pannalaam.

Practical example

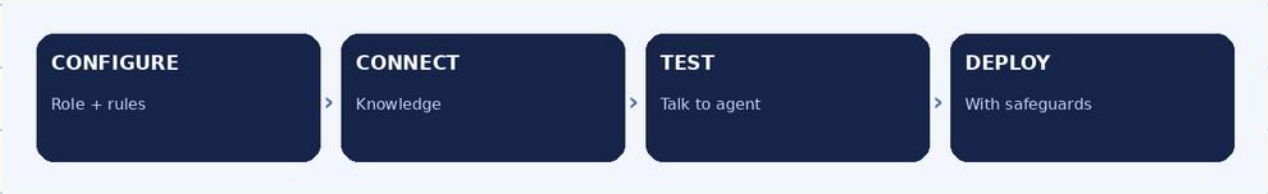

Prompt: "Gentle rain on a classroom window, soft ambience, no speech, 5 seconds."

Speciality / Tip: Creates custom atmospheric effects without recording them yourself.

09 Conversational voice agents

ENGLISH — Design a voice agent with instructions and a knowledge source, configure speech and conversation settings, test questions, and deploy only after privacy and accuracy checks.

TANGLISH — Website-ku pesura AI assistant venumna agent create pannu, instructions and knowledge add pannu, questions test pannu, app-la integrate pannu.

Practical example

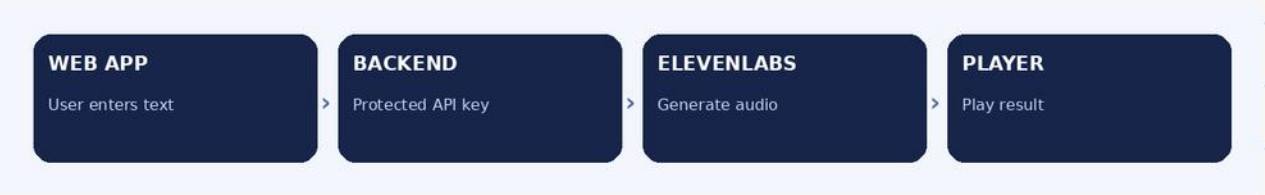

Example: An AI VERSE helper answers "How do I use text-to-speech?" using your approved documentation.

Speciality / Tip: Interactive two-way conversation, unlike one-way narration.

10 Developer API — integration idea

ENGLISH — Developers can use official APIs and SDKs to send text and receive generated audio. Store API keys only on a secure backend; never expose them in browser JavaScript or public repositories.

TANGLISH — Un website-la voice feature add panna API use pannalaam. API key frontend-la podakoodadhu; secure backend-la dhaan store pannanum.

Practical example

Example flow: AI VERSE frontend ⊠ secure server ⊠ ElevenLabs API ⊠ audio response.

Speciality / Tip: Production integrations need usage limits, authorization and error handling.

11 Pricing, credits and rights

ENGLISH — ElevenLabs offers a limited free tier and paid plans. Credits, limits, supported features and prices can change. Commercial-use rights depend on the applicable plan and terms; check before publishing monetized content.

TANGLISH — Free plan-la limit irukkum da. Long audio, cloning, commercial usage-ku paid plan thevai padalaam. Generate panna munnadi credits and license check pannu.

12 Troubleshooting and best practices

ISSUE: Audio sounds unnatural

ENGLISH: Try a different voice/model, punctuation and shorter sentences.

TANGLISH: Voice/model maathi, sentence short-ah try pannu.

ISSUE: Wrong pronunciation

ENGLISH: Spell names phonetically and test short phrases.

TANGLISH: Peru pronunciation easy-ah rewrite panni test pannu.

ISSUE: Credits exhausted

ENGLISH: Review current usage and plan limits.

TANGLISH: Credits limit check pannu; thevai illama repeat generate pannadha.

ISSUE: Tamil-English mixed output poor

ENGLISH: Try a compatible multilingual model and test each sentence.

TANGLISH: Multilingual model try panni rendu language-um test pannu.

ISSUE: Voice clone sounds weak

ENGLISH: Use clean recordings and follow voice-sample guidance.

TANGLISH: Noise illaadha clear recording use pannu.

ISSUE: Upload fails

ENGLISH: Check supported format, file size, browser and connection.

TANGLISH: Format, size, internet connection check pannu.

Real-world learning projects

YouTube intro voiceover: script ☒ voice ☒ generate ☒ edit video

College notes narration: lesson text ☒ multilingual speech ☒ listen

Podcast dubbing: source audio ☒ language selection ☒ review translation

Accessible study materials: notes ☒ audio version for listening

Website voice assistant: approved FAQ ☒ voice agent ☒ safe deployment
